

Product Information

1-2-3 Door Shield is manufactured in Denver, Colorado in partnership with a high volume, independent corrugated cardboard manufacturer. The standard product version consists of two-ply corrugated Kraft board containing a patented, abrasion-resistant inner liner board designed to protect delicate finishes. The result is a product with excellent abrasion resistance which is also recyclable. This composite, heavy-duty pulp paper-based product effectively protects both sides of a door during shipping and after door installation, and is durable enough for re-use.

The unique design of **1-2-3 Door Shield** includes a carefully calibrated series of engineered perforations that allow the product to be precisely folded for shipping and handling, and to prevent damage to the protective inner liner. **1-2-3 Door Shield** also features pre-engineered cut outs for door latch hardware, as well as specially-designed saddle and edge tape that will not adhere to or damage delicate door finishes. The product comes pre-assembled and individually shrink-wrapped to ensure the highest level of quality control for the end user.

1-2-3 Door Shield is offered in standard, double-wall brown Kraft outer liner board construction with patented, color-coded protective inner liners. Custom orders can include a white outer liner board and up to 5-color printing. **1-2-3 Door Shield** provides an excellent opportunity to create a "billboard" that can feature unlimited custom logos and messages.
